MEDIA RELEASE

FOR IMMEDIATE RELEASE

Sputnik V Vaccine donated by the Republic of Serbia arrives

On 2nd September 2021, Namibia received fifteen thousand (15 000) doses of Sputnik V Vaccine donated by the Government of the Republic of Serbia. In total 30, 000 doses have been donated and the reminder shall be delivered in the coming weeks. Sputnik V vaccine is manufactured by Gamaleya National Centre in Federal Republic of Russia, and is approved to be used in Namibia as per the provisions of the Medicines and Related Substances Control Act, Act 13 of 2003.

The Government of Serbia paid for all transportation costs for the vaccine to Namibia. The Government of Namibia is busy with logistics to roll out the Sputnik V vaccine nationally. The public shall be informed when the vaccination with this vaccine will commence.

Namibia is grateful for this generous gesture from the Government of Serbia.

This support is a demonstration of true solidarity, especially during this time when we are confronted with combating the devastating effects of COVID-19 in our country.

Issued by:

Ben Nangombe
Executive Director
